1959

The current plant was founded by Nino Benasedo in Caronno Pertusella.

1882

The company was born as bodied oils producer.

1963

Great technical innovation thanks to Valerio Scocco.

1975

Nino Benasedo passed away and Valerio Scocco took over the company.

THE COMPANY

N. Benasedo S.p.A. was born in Milan in 1882, producing bodied linseed oils and in 1959, Nino Benasedo founded the current plant in Caronno Pertusella.

Benasedo main activity focused on the production of resins for coatings, meeting customer needs through constant innovation.

From its earliest beginnings, the company policy has been addressed to meet the widest possible requirements of the market whilst tailoring the products, to satisfy the specific needs of the individual customer.

In 1963, a young chemist, Valerio Scocco, was hired and brought great technical innovation to the company.

The already existing portfolio of alkyds, anticorrosion and deco products was expanded with the development and introduction of new classes of resins, including polymers for furniture paints, polyols, isocyanates and direct gloss UPR.

In 1975 Nino Benasedo died and the guidance of the business passed to Valerio Scocco and his family to give solid and continuous control of the company.

Over the following years, for can and coil coating application, Benasedo successfully developed new polymers.

2002

Poliresin became part
of Benasedo group.

2020

Improvement
of facilities.

2015

Construction of three
new reactors to increase service
and production capacity.

The acquisition of the Poliresin company in 2002, allowed the introduction of phenolics, acrylics and epoxides to the portfolio, broadening the range of application fields.

Over the years Benasedo and Poliresin have continued to invest in modernization, automation and safety. Both companies earned the Certiquality Certification.

The technological development of recent years has been characterized by the study of products with lower environmental impact, focusing on the introduction of water-based products, biobased monomers, green solvents and recycling materials.

PRODUCT NAME	CLASS OF RESIN	SOLVENT	SOLID CONTENT (%)	VISCOSITY (G.H.) / (cP)	ACID VALUE ON SOLID (mg KOH/g)	COLOUR (G.H.) MAX.	OH ON SOLID RESIDUE (%)	GLASS TRANSITION TEMP. (T _g °C)	APPLICATION, CHARACTERISTICS AND USES
BENESTER 8848 *	SATURATED POLYESTER	NAPHTHA SOLVENT SN 100/ BUTYL GLYCOL	60	2500 - 4200 cP (25 °C)	8	3	2.1	25	<ul style="list-style-type: none"> - Suggested for interior can coating 2 pcs., caps and closures - Characterized by high reactivity, flexibility, adhesion and good sterilization properties in acid medium - Tin free and is in full compliance with FDA 175.300 - Employed in a baking system, crosslinked with phenolic resins, amino resins and/or blocked aliphatic polyisocyanates
BENESTER 813 *	SATURATED POLYESTER	NAPHTHA SOLVENT SN 150/ BUTYL GLYCOL	55	Y - Z1	2	3	0.6	23	<ul style="list-style-type: none"> - Deep drawable stamping enamels for interior protection of can coating - Flexibility, reactivity and adhesion to metal - Crosslinked with phenolics
BENESTER 9350	SATURATED POLYESTER	NAPHTHA SOLVENT SN 150	50	Z3 - Z4	5	3	0.6	30	<ul style="list-style-type: none"> - Particularly suggested for interior can coating - Adhesion, very good flexibility, and hardness and chemical resistance - Under FCN - Crosslinked with amino resins, blocked polyisocyanates and phenolics
BENESTER 9360	SATURATED POLYESTER	NAPHTHA SOLVENT SN 150	50	Z1 - Z3	3	3	0.6	62	<ul style="list-style-type: none"> - Suggested for interior can coating 2 pcs. for BPA_{ni} application - High reactivity, flexibility, adhesion and good sterilization properties also in an acid medium - Compliant with FDA 175.300 - Crosslinked with amino resins and/or blocked aliphatic polyisocyanates
BENESTER 8496	SATURATED POLYESTER	NAPHTHA SOLVENT SN 100/ BUTYL GLYCOL	60	2500 - 5200 cP (25 °C)	5	3	0.8	27	<ul style="list-style-type: none"> - Size coat for low to medium deformed end uses - Good base for different OVP
EPOBEN C872 *	EPOXY ESTER	NAPHTHA SOLVEN SN 150/ BUTYL GLYCOL	57	Y - Z1	4	5	5		<ul style="list-style-type: none"> - Epoxy ester for non-yellowing OPV varnishes

*The resin foresees a MOQ
